

CES variables biophysiques

F. Baret, M. weiss, A. Verger, B. de Solan
W. Li, Liu S.

Plan

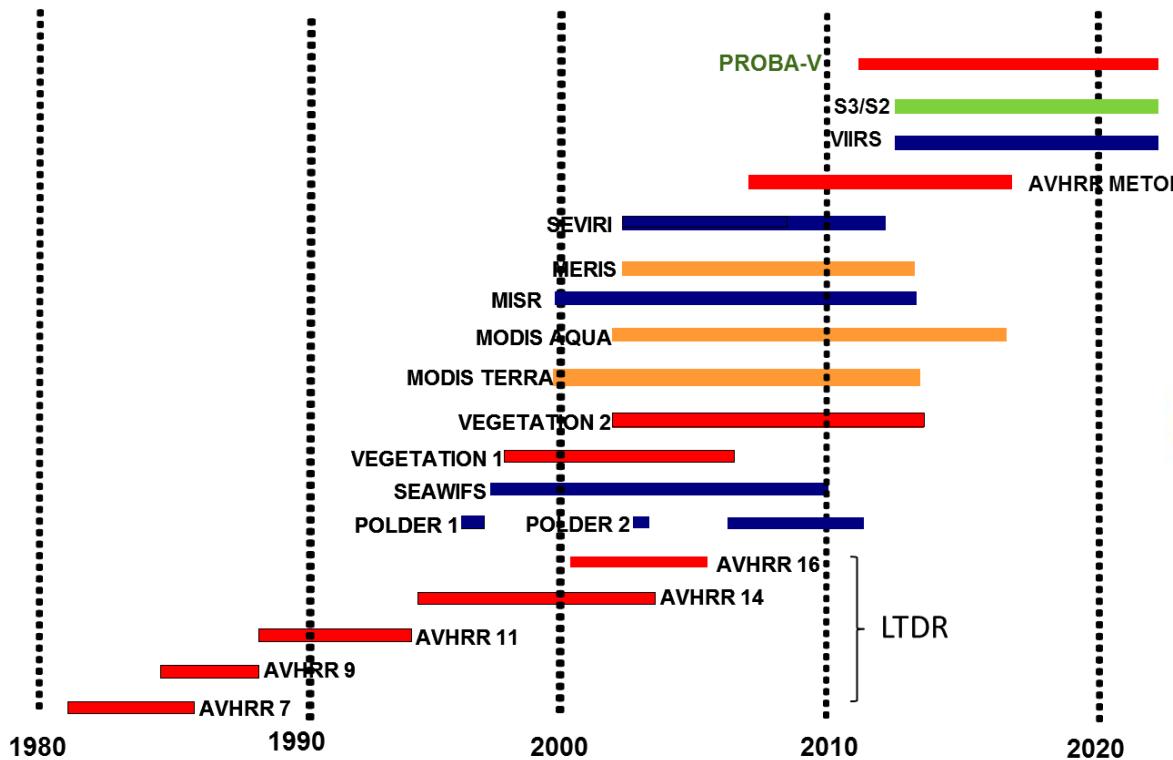

- **Développement de produits globaux**
- Utilisation de modèles de culture
- Utilisation d'observations spatiales
- Combinaison modèles et observations spatiales: Assimilation
- **CONCLUSION**

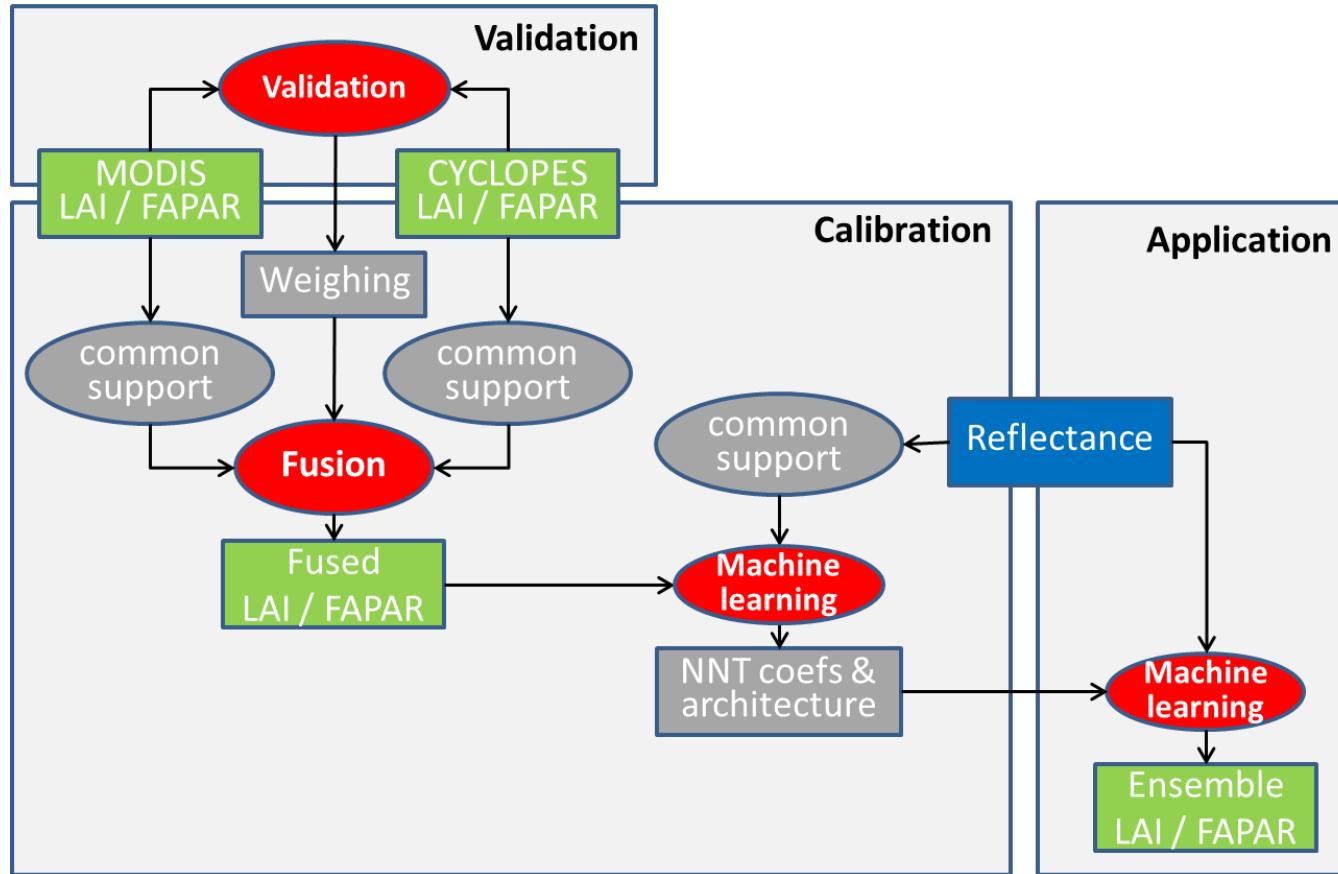

Suivi global sur longues périodes: GEOV1

geoland²

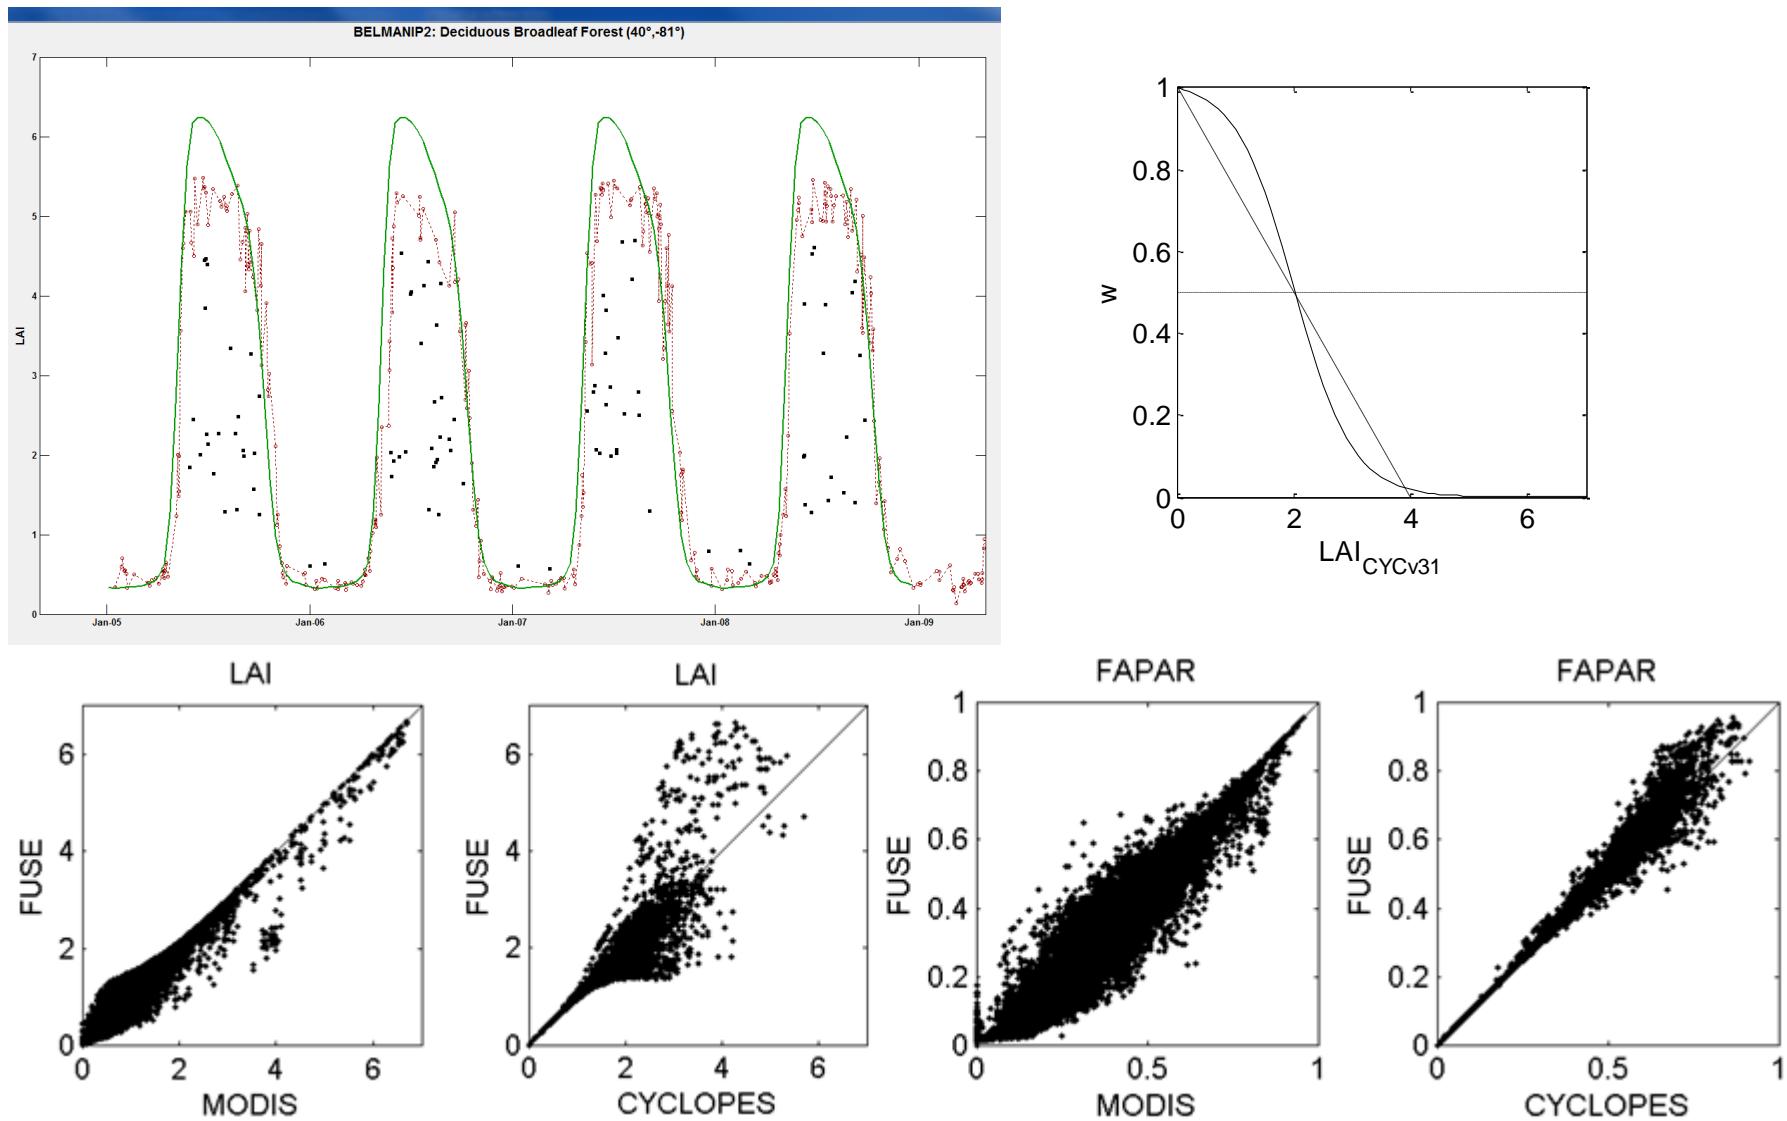

Développement de séries temporelles globales longues et cohérentes à résolution kilométrique (hectométrique) pour le suivi des évolutions/anomalies: LAI, FAPAR, FCOVER

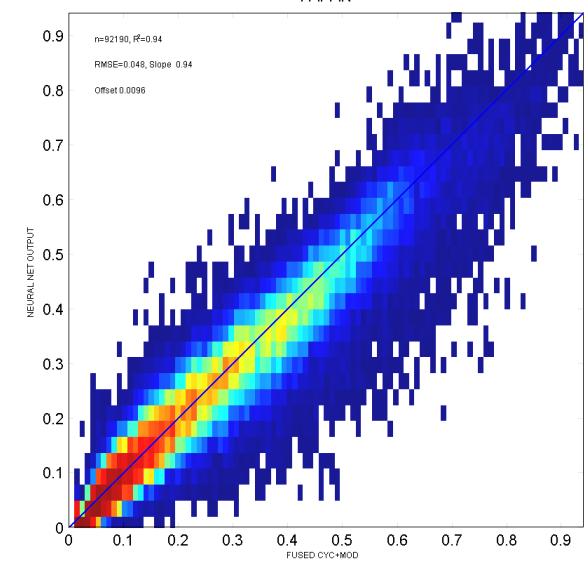

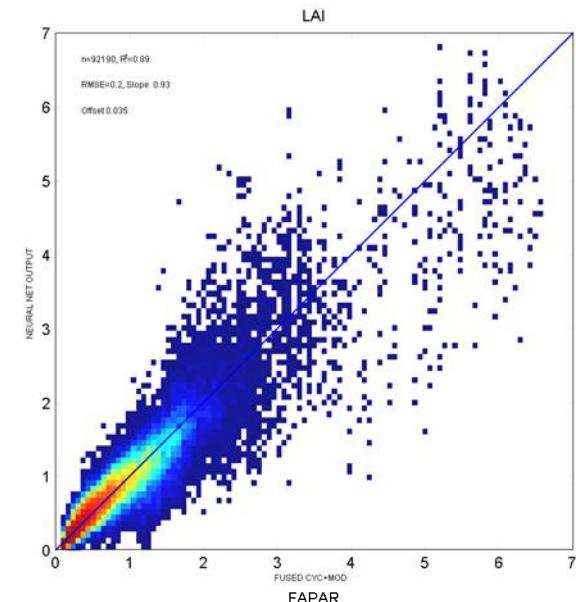

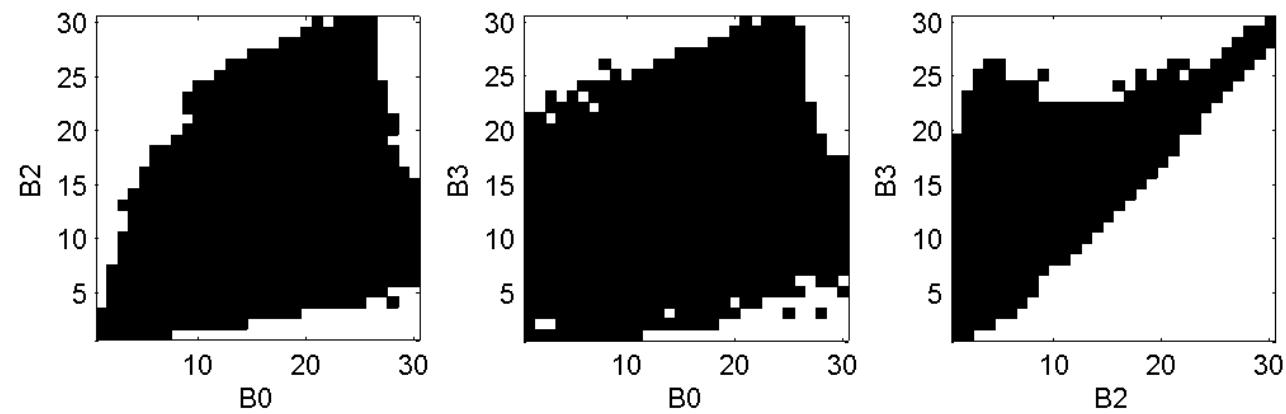

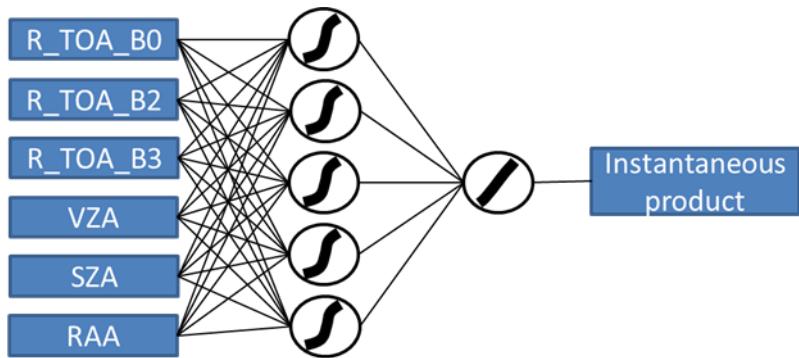

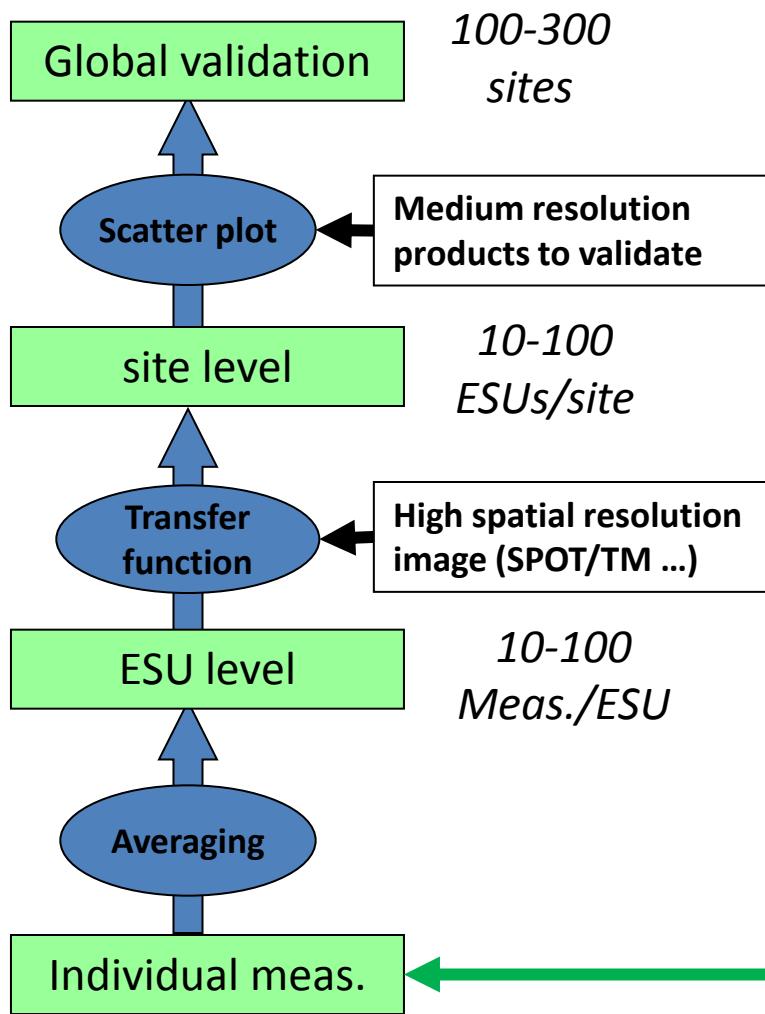

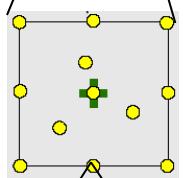

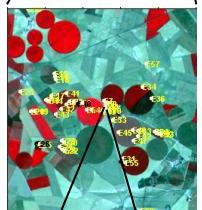

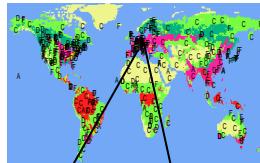

Step A4 Learning from CYCLOPES and MODIS

Step A4 Learning

Validation des produits biophysiques

PIETON, UAV...

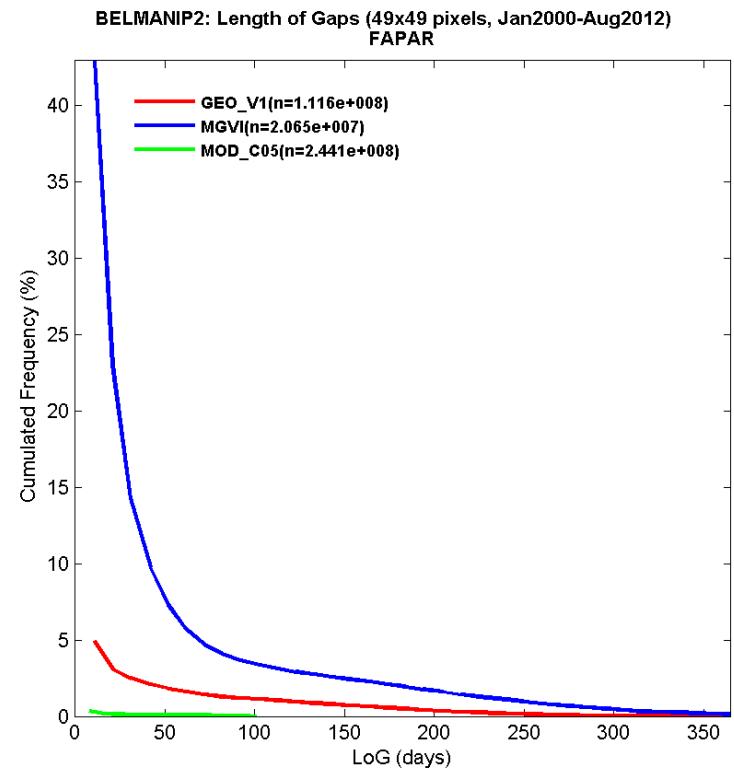

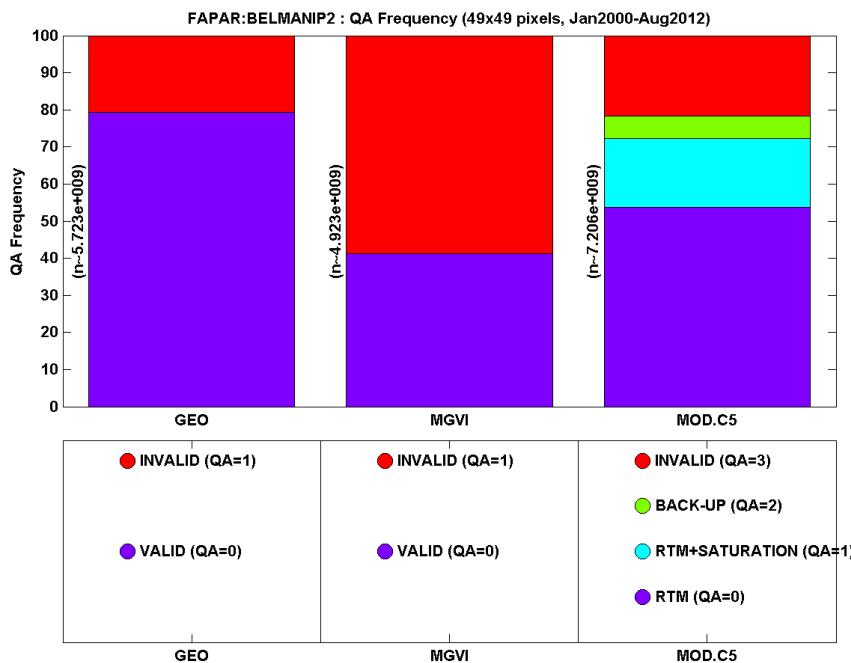

Validation : Completeness

- Percentage of valid data for BELMANIP2 sites
(site, biome, continental & global level, 49x49 km²)

Validation : Completeness

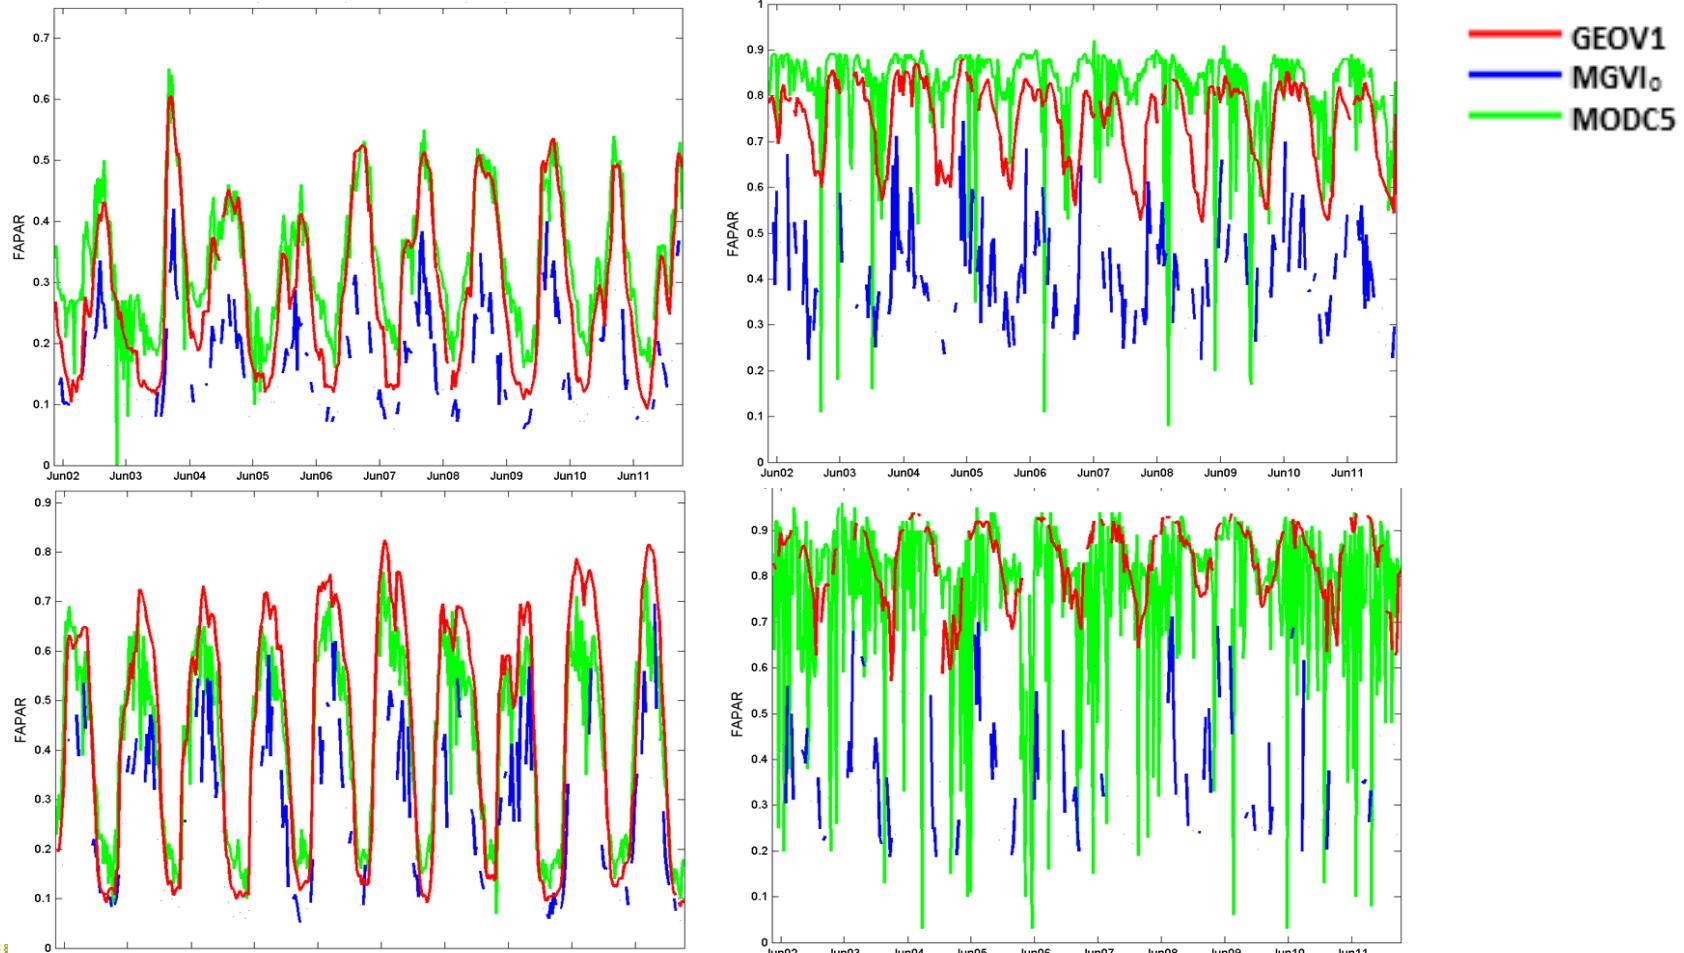

- Fraction of valid data for BELMANIP2 sites ($49 \times 49 \text{ km}^2$)
- Statistical distribution of LoG (Length of Gaps) ($49 \times 49 \text{ km}^2$)

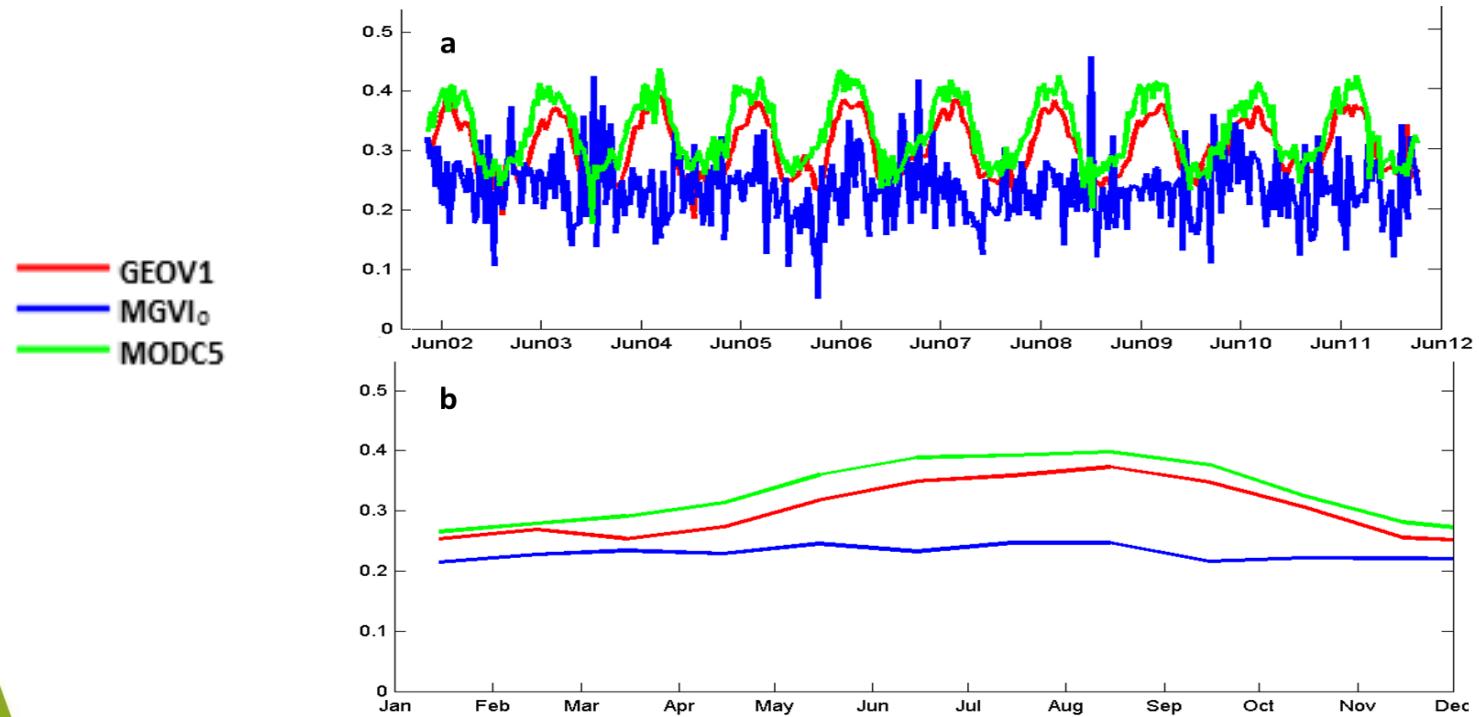

Validation :Temporal Profiles

➤ BELMANIP2 & DIRECT ($3 \times 3 \text{ km}^2$)

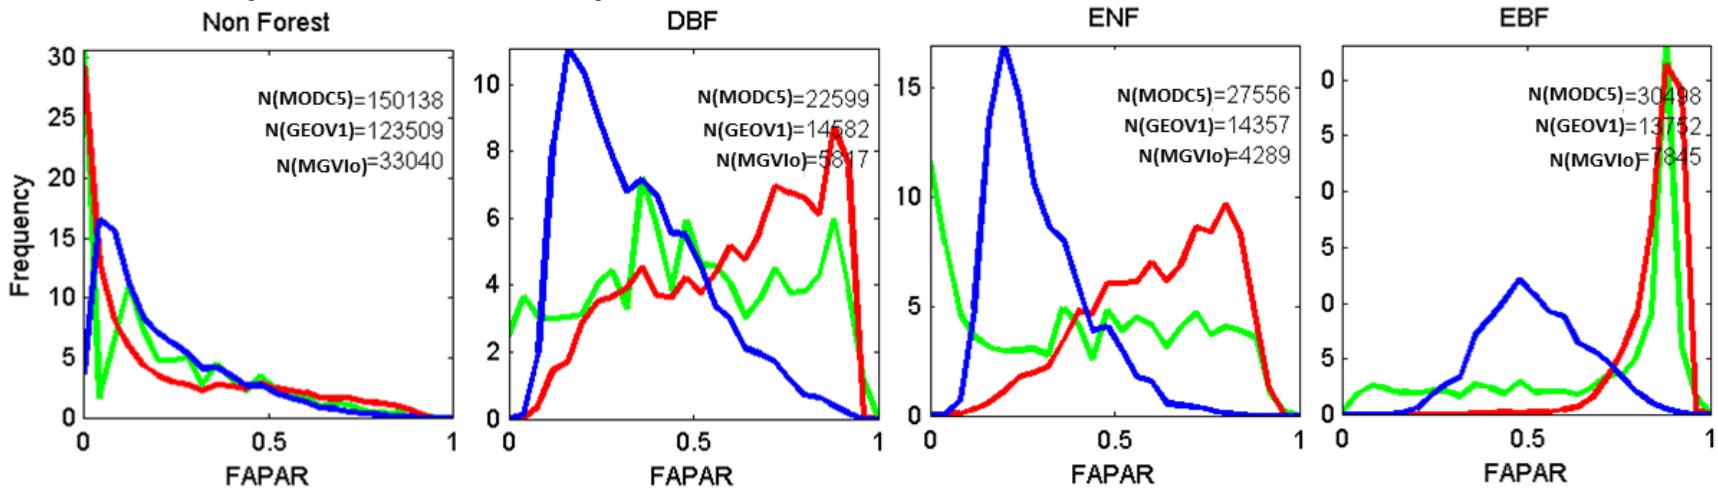

➤ Stability: global average

- Dynamics: all BELMANIP, per date
- Seasonality : all BELMANIP, and over years

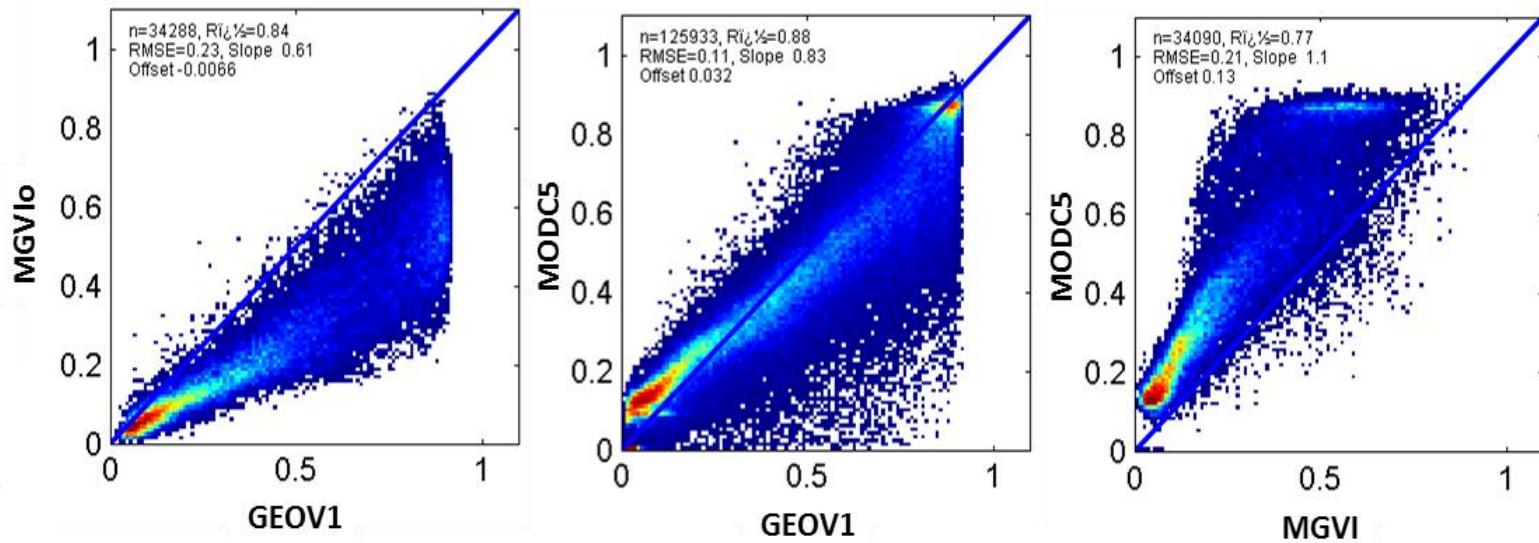

Validation : bulk statistics analysis

- BELMANIP2 (3x3km²):
- histograms
- per biome, per continent

- GEOV1
- MGVI_o
- MODC5

- BELMANIP2 (3x3km²):
 - scatterplots
 - per biome, per continent

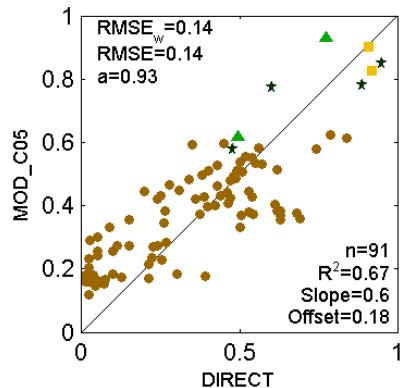

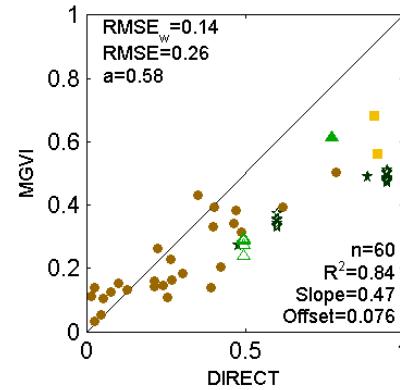

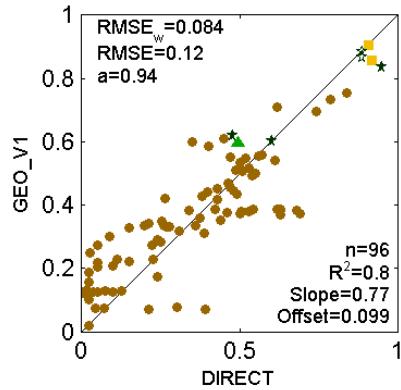

Validation : Ground Measurement

- Scatterplots between products & ground measurements (DIRECT, 3x3km²) + statistics

FAPAR: Jan2000-Aug2012 (smooth + interpolation)

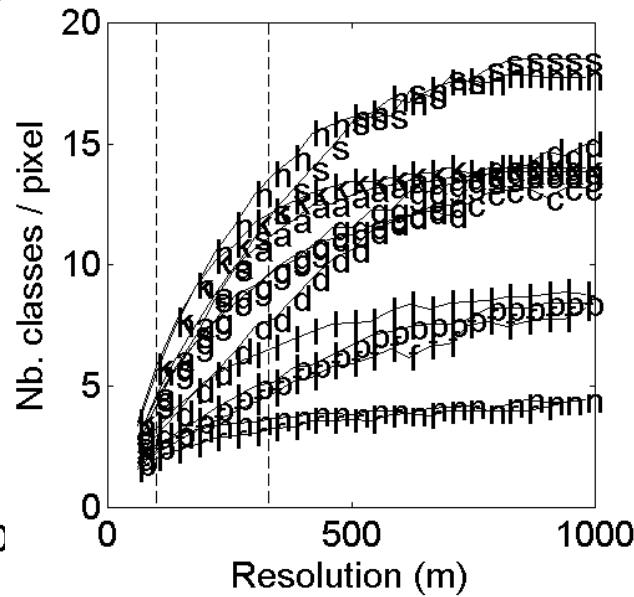

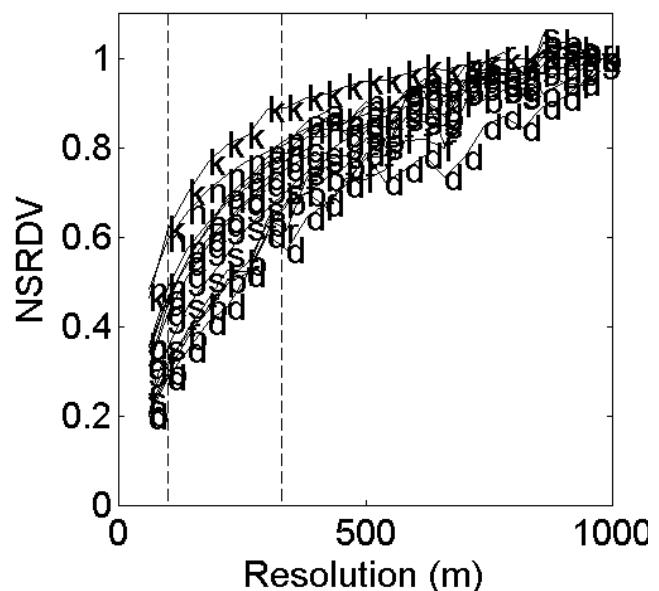

- △ Extrapolated ground value(acquisition out of validation)
- ▲ Needleleaf Forest
- ★ Evergreen Broadleaf Forest
- Deciduous Broadleaf Forest
- Non Forest

Interest of high spatial resolution

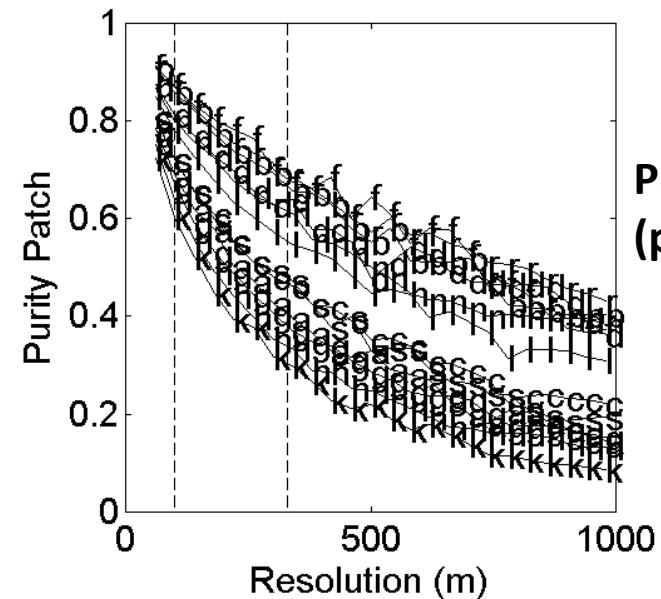

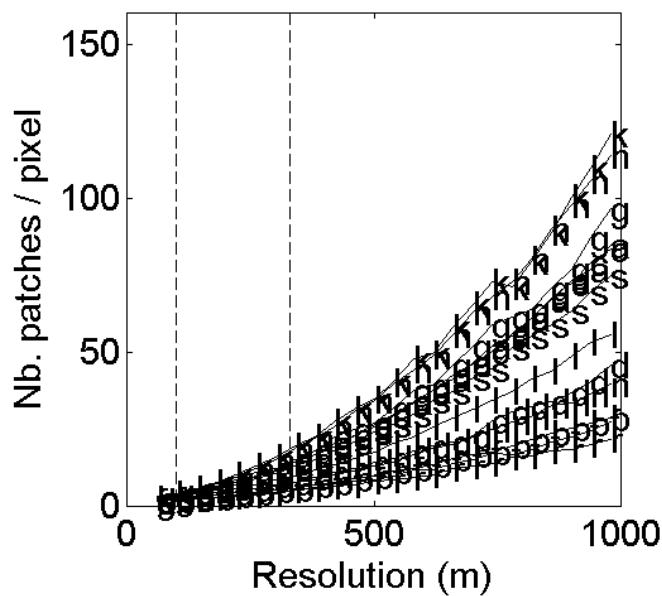

Impact of the spatial resolution

Variability
within
pixels:
Normalized
Standard
Deviation
(NSRDV)

Number of
patches per
pixel

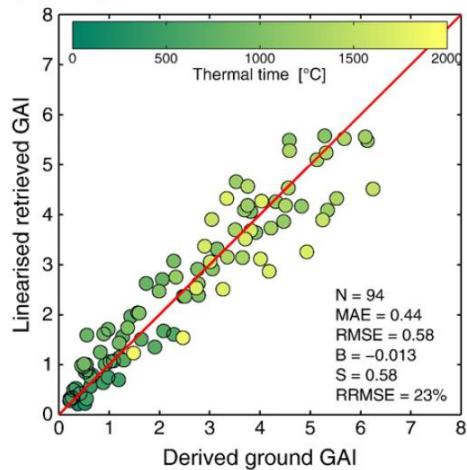

Number of
classes per
pixel

Purity
(patches/classes)

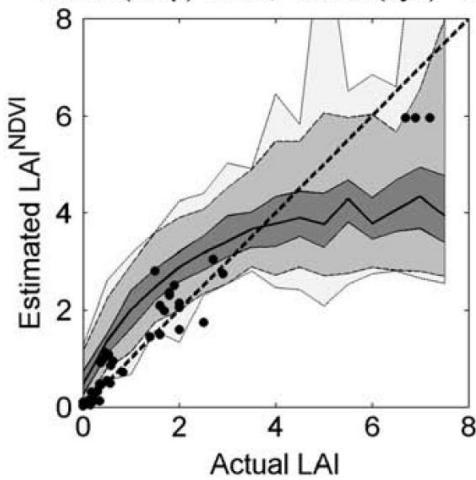

Approche Empirique / physique

EMPIRICAL

(a) Empirical retrieval

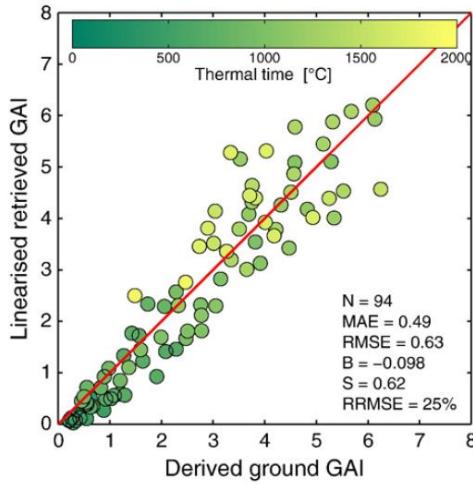

RMSE(emp)=0.48; RMSE(syn)=1.73

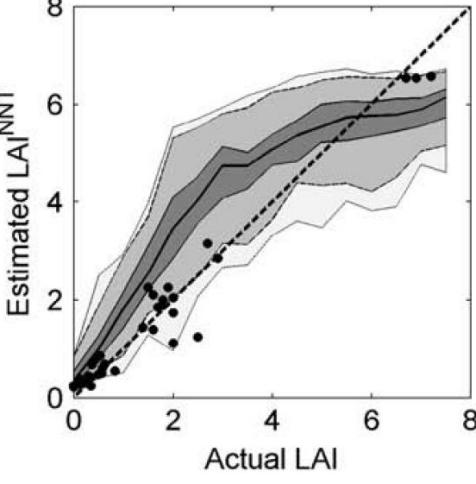

PHYSICAL

(b) Physical-based retrieval

RMSE(emp)=0.37; RMSE(syn)=1.13

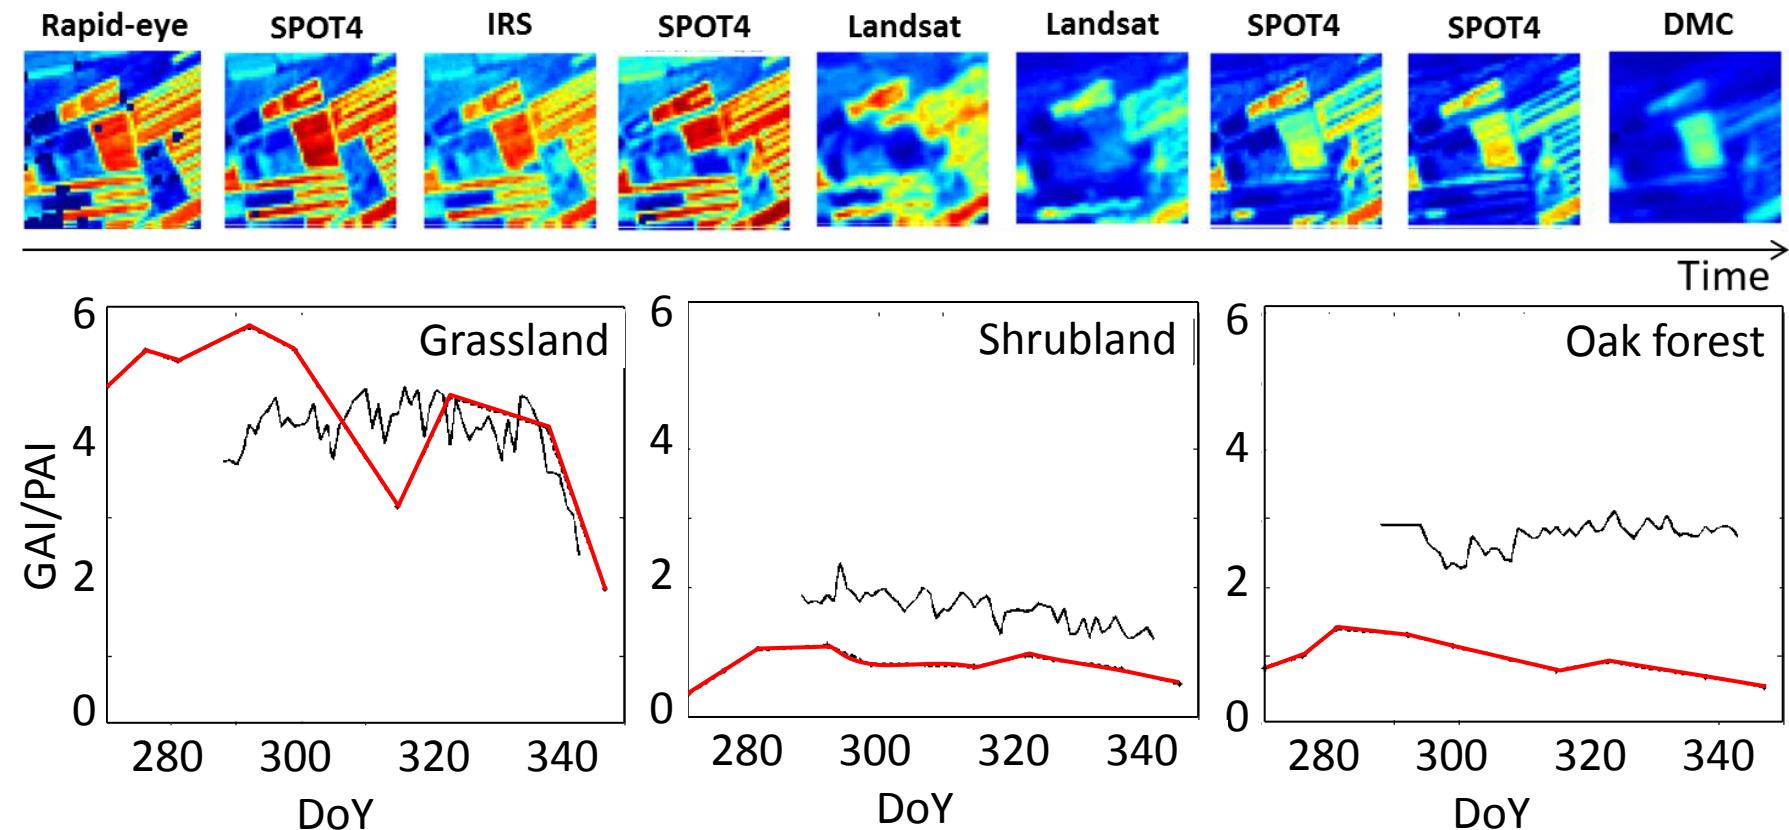

Les approches physiques ont atteint une bonne maturité

Applications opérationnelles

Development of generic decametric algorithms

➤ S2, LANDSAT, SPOT, DMC ...

Projets: SYNCRAU (TOSCA), VALSE2 (ESA), BVNET

Combination hecto-decametric observations

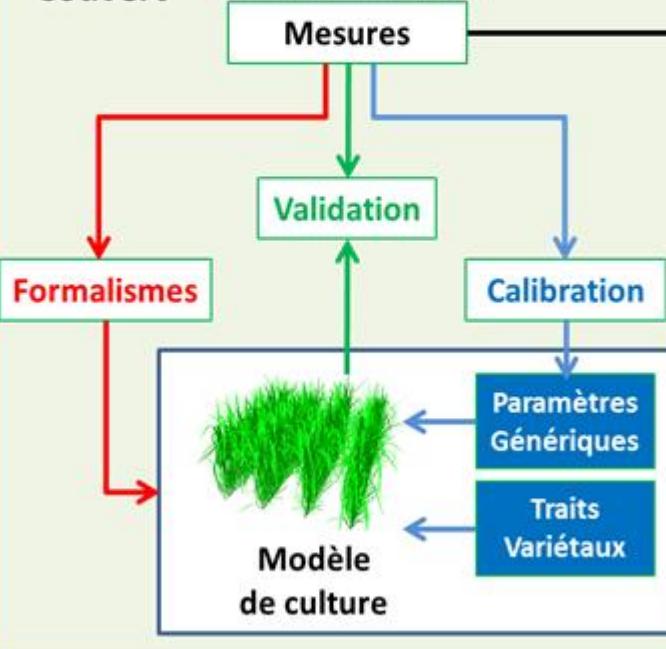

- Combination of
 - Hecto (PROBA-V): daily observations @300m
 - LANDSAT (S2) observations @20m
- Disaggregation
 - Characterization of the PROBA-V PSF (products)

Development of specific products for decametric observations

Expérimentation μ-parcelles (Phénotypage, essais agronomiques)

Couvert

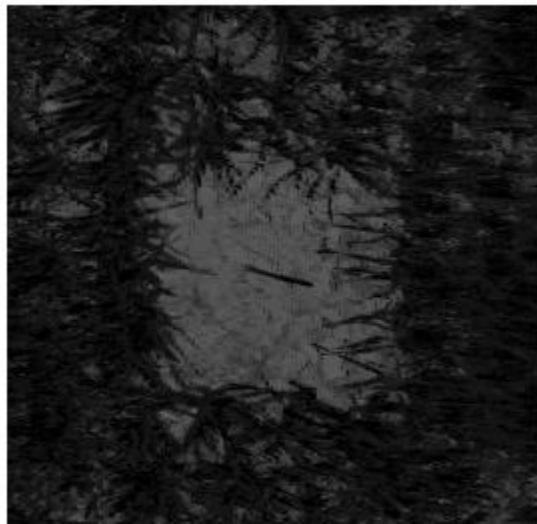

Développement d'ITK et d'OAD

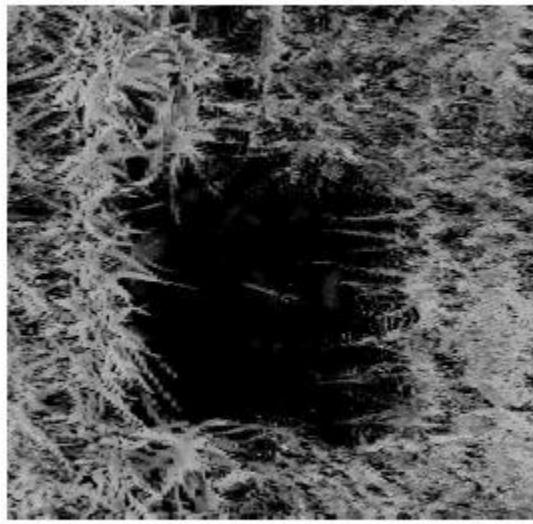

Modèle complet
Mesures détaillées

Modèle simplifié
Mesures intégrées

UAV (dynamics) and phenomobile

Lidar couleur

Lidar hauteur

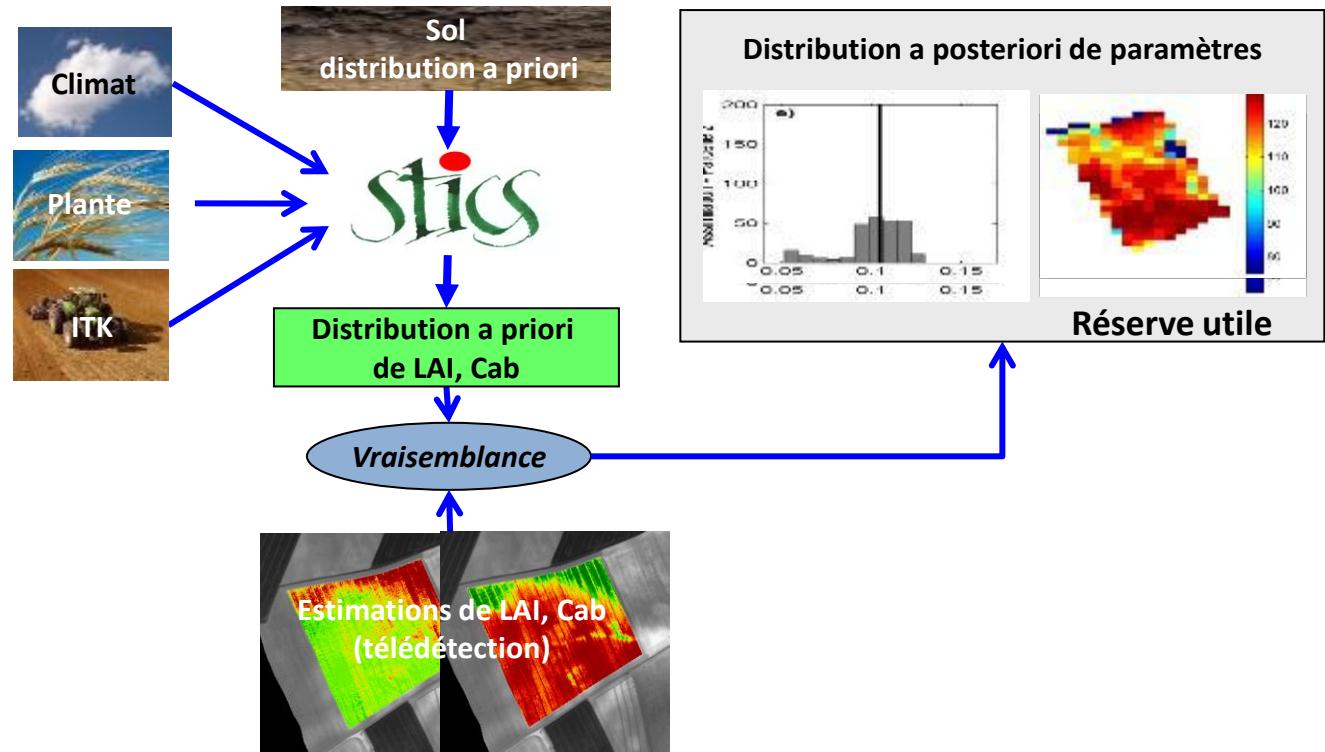

Image RGB

Assimilation des observations dans les modèles de culture

Estimation des propriétés des sols

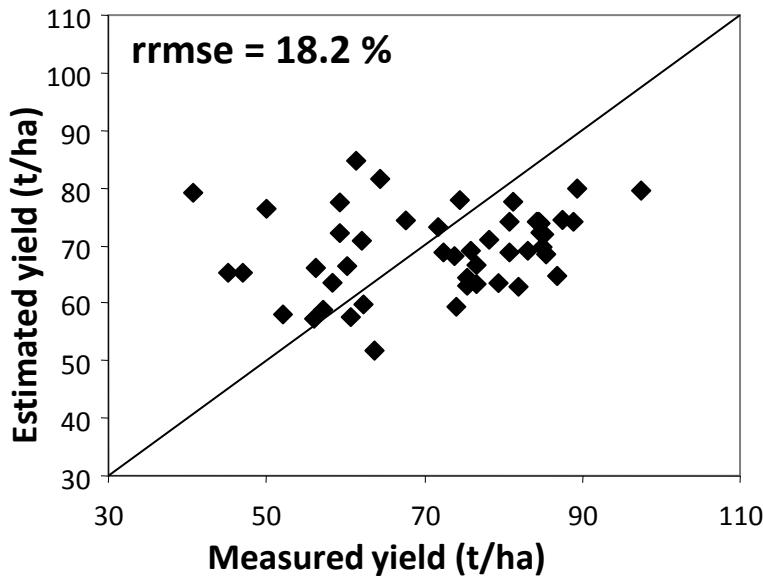

Principe

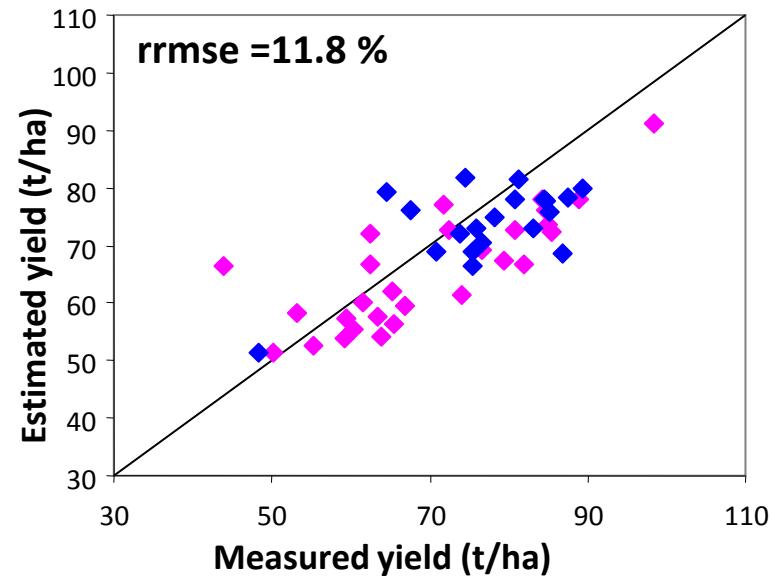

Assimilation des observations dans les modèles de culture

Exemple: rendements de betterave sur un bassin sucrier (Picardie)

Avant assimilation

Après assimilation

CONCLUSION

- Continuation on global products (maintenance, adaptation to S3, long time series)
- Higher spatial resolution:
 - Virtual constellations
 - S2
 - Combination of PROBA-V with L8+S2
- Specific products
 - Synergy with phenotyping activities
- Validation
 - Development of ground measurement systems
 - UAV?
- Assimilation
 - Improvement of canopy structural/functional models
